

`console.log()` in JavaScript

`console.log()` is a built-in function in JavaScript that allows you to output information to the console. This is often used for debugging purposes to check the values of variables or to confirm that certain parts of your code are executing properly.

values & variables in JavaScript

In JavaScript, a variable is a container that holds a value. Variables are used to store data that can be accessed and manipulated throughout your program.

```
let myVar = "Hello";
```

Variable name

Value
